Solutions for Luxury Hotels

TV Movement Systems for Exclusive Hotel Rooms

Integrating the technology guests expect can become a design challenge. Among the most critical elements, the television is often one of the most complex to manage.

It is an essential feature in any hotel room, yet from an aesthetic standpoint a black screen mounted on the wall rarely blends harmoniously into a carefully conceived interior design project.

How can hotels offer this technology without compromising the visual identity of the space, avoiding the occupation of an entire wall and constraining the room's layout?

Our movement systems offer a solution: they allow the television to disappear completely when not in use. The screen can be concealed in the ceiling, behind sliding panels, inside furniture or mirrors. When needed, the mechanism activates and positions the TV at the optimal viewing height. When it is not, it vanishes, leaving the space visually uncluttered.

Sea & Symphony systems represent a genuine advantage in space design, making it possible to reconcile guest expectations with the integrity of the project.

Since 1995

**30 years of experience,
reliability and technology.**

Sea & Symphony has been designing TV movement mechanisms since 1995.

The company initially specialised in solutions for the luxury yachting sector, an industry with requirements closely mirroring those of hospitality: seamlessly integrating modern technology into spaces designed with extreme care, under strict constraints regarding dimensions, mechanical noise and long-term reliability.

Our mechanisms are ready for easy integration with existing home automation and building management systems.

In this brochure we will walk through the range of products applicable to the hospitality sector, the main technical solutions and the factors to consider when implementing them.

Our solutions

Our range of movement systems is already the most extensive on the market, and continues to grow.

It encompasses numerous models capable of meeting every design requirement.

Discover all our solutions for the hospitality sector.

TV Lifts

Motorised TV Lifts

A New Design Paradigm

With our TV lifts, architects and interior designers are finally free to plan spaces without the constraints imposed by the conventional fixed TV position.

Our range includes several models, each designed to address specific project requirements.

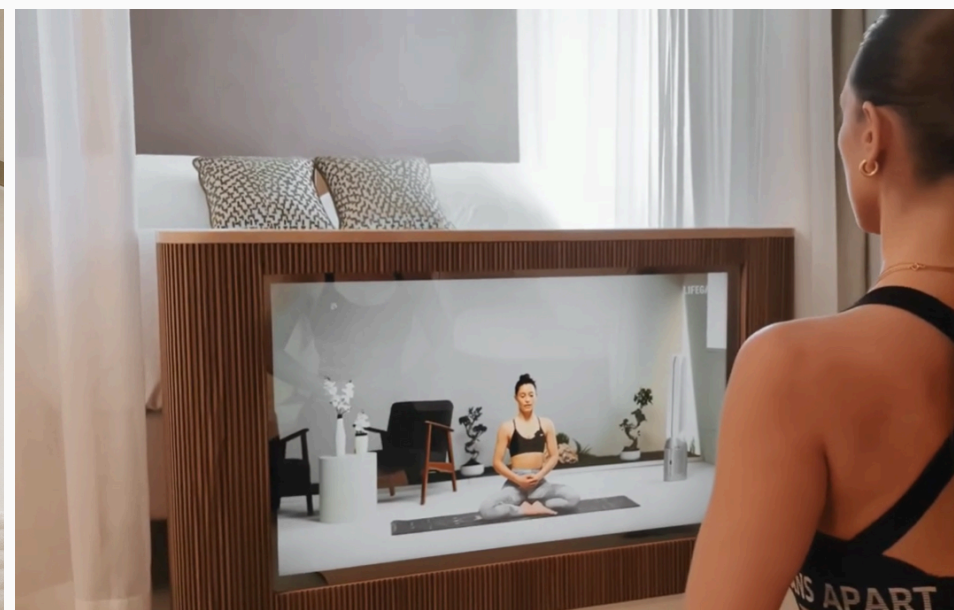

Standard rise-and-fall lifts are well suited to concealing the TV where space is not a limiting factor.

When the need is to install a large-screen device inside furniture of limited height, double-stroke lifts deliver the necessary travel without compromising the elegance of the furnishing.

For rooms requiring optimal viewing from multiple positions (bed, seating area, desk) rotating lifts allow the screen to be oriented as needed, adapting to the different ways a room is used.

Finally, monitor and small-screen lifts are ideal for creating distinctive, eye-catching reception areas and meeting spaces equipped for business meetings, conferences and events.

Rotating TV Lifts

Space Versatility and Design Freedom

Luxury hotel rooms are often used for different purposes depending on the time of day and the type of guest. The same room may serve as a workspace during the day, a place to relax in the evening, or a spot to exercise in the morning.

Fixing the screen to the wall rigidly defines the function of one area of the room. Once the screen position is decided, the bed, seating and desk must all be arranged accordingly.

Concealment systems offer greater freedom: the television can be integrated wherever it is most convenient, without its position dictating the orientation of the entire room.

The versatility these systems provide is particularly appreciated by business guests who use their room as a workspace, and during extended stays where the room must adapt to different daily routines.

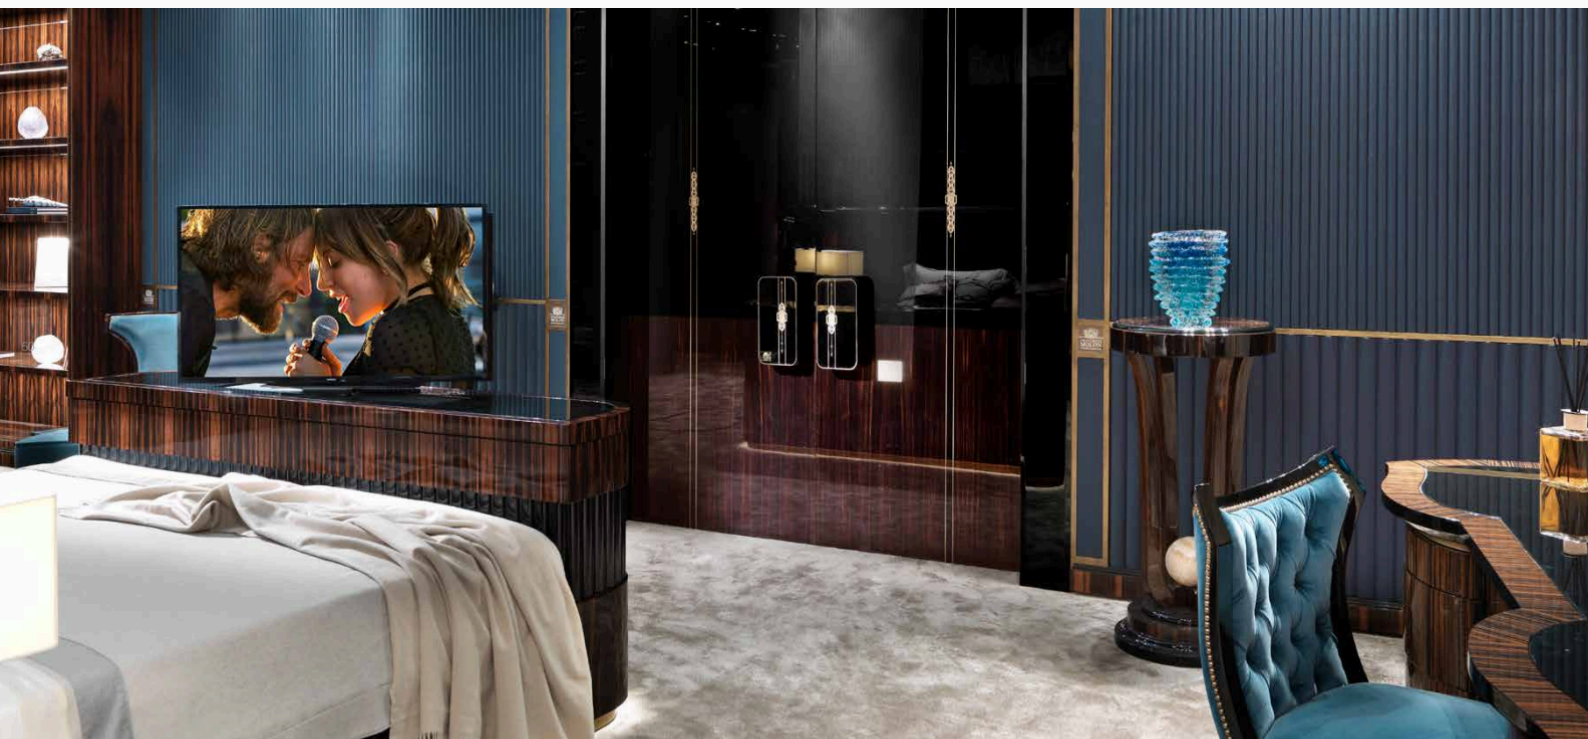

Invisible and Integrable

Ideal for rooms configured for multiple uses, the rotating mechanism allows the TV to be viewed from several positions.

The mechanism orients the screen to the desired angle, ensuring optimal viewing from the bed area to the suite lounge, from the

bed area to the suite lounge, from the desk to the seating area.

When the mechanism is closed, the television disappears entirely, leaving the sightlines completely unobstructed. When open, the clean design of the system blends harmoniously with any type of furnishing.

Ceiling Systems

Rethinking the TV Position

One of the most popular solutions chosen by hotels is the ceiling drop-down system. These mechanisms allow the television to disappear completely when not in use, leaving spaces clean and uncluttered.

A refined solution with strong visual impact, it is particularly suited to rooms where panoramic views through wide windows are a key asset. When not in use, the screen remains hidden, leaving the entire field of vision free.

Within our range of ceiling systems, several models are available, including an ultra-slim version just 120 mm deep.

This ultra-slim model makes ceiling systems especially well suited to hotel renovations: the mechanism can be integrated without significant structural work, making it installable even in buildings where bulkier solutions would not be feasible.

Maximum Design Flexibility

A highly versatile variant of this mechanism includes an electric rotation system. The television can be oriented to different angles, allowing optimal viewing from multiple points in the room.

This is particularly valued in open-plan suites or rooms with complex geometries, where guests might watch from the bed, a sofa or the desk area.

Never Compromise on a Breathtaking View

Installing the screen directly in the ceiling means no wall needs to be sacrificed to accommodate a TV position.

When not in use, the screen stays hidden, leaving the view as the sole protagonist.

A refined and distinctive solution that enhances stunning vistas and creates a truly unique experience in the suites of exclusive hotels and resorts.

From Yachting to Hospitality

Designed for complex projects

The ultra-slim ceiling system was born from experience gained in the marine sector, where space constraints and reliability standards are particularly demanding.

In superyachts and mid-size vessels, ceilings serve a dual function: they form the structural base of the upper deck and house cabling, piping and air conditioning systems. The space available for TV mechanisms is therefore extremely limited.

Designed for these complex environments, the 120 mm system has been widely adopted by Italian and international shipyards.

That same compactness makes it ideal for hotel renovations: the mechanism can be integrated without significant structural intervention, and can be installed even in historic buildings where larger solutions would simply not be achievable.

Under-Bed Systems

Maximum view, Minimum footprint

With this motorised system, it is possible to integrate a retractable TV beneath beds, furniture or other structures.

Compact and elegant in design, it offers an alternative to traditional TV lifts while keeping the room visually clear when the television is not in use.

By concealing the TV beneath the bed, this solution leaves the walls completely free, allowing natural light to flood in through wide windows without visual interruption.

It proves a valuable ally for hotels that boast exceptional views, whether an unspoilt alpine landscape or the dramatic skyline of a major city. With our movement systems, no black screen will ever compromise the guests' view.

Wow Factor

When a guest sees the television rise silently from beneath the bed, the technological element becomes part of a memorable stay.

An unexpected detail that leaves a lasting impression, one guests remember and share.

Versatility

Two configurations

The under-bed mechanism is available in two configurations: fixed bracket and telescopic bracket.

The first is a simpler solution that requires more available space around the bed.

The second, more articulated version, is ideal when space at the foot of the bed is limited.

In this configuration the TV slides out from under the bed, rotates 90 degrees into a vertical position, and then rises via the telescopic bracket to the optimal viewing height.

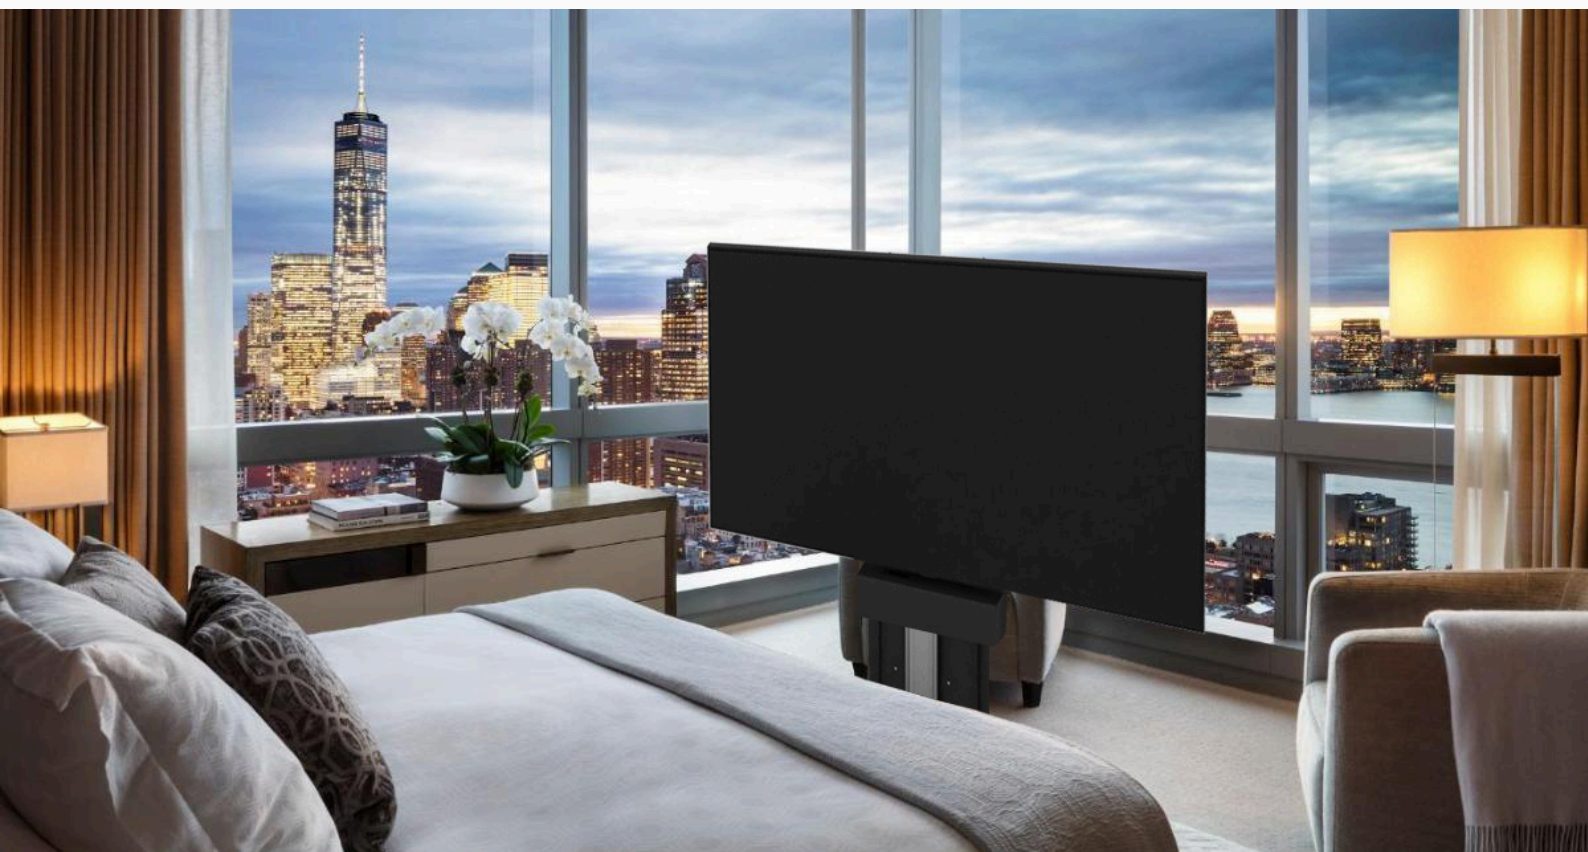

More space for guests

The system eliminates the need to dedicate furniture or walls to the TV, freeing up the room entirely.

When not in use, the mechanism remains hidden beneath the bed, keeping the space visually tidy

Particularly well suited to suites with wide panoramic windows, rooms with a minimal layout, and junior suites where space optimisation is a priority.

The ideal choice when preserving the view and optimising space are the priority.

Enhancing Outdoor Spaces

Our hotel solutions extend beyond the guest room. Outdoor lounges and restaurants can accommodate our mechanisms, integrating technology without compromising design.

The extensive experience gained in the marine sector has enriched our know-how, allowing us to offer a product that is robust and durable in outdoor environments.

From material selection to component sizing, we create reliable products built to withstand the specific conditions of the environment in which they are installed.

Creative ideas for every environment

In converted villas and resorts with extensive outdoor areas, our systems transform common spaces into multifunctional environments.

Screens can be installed inside low coffee tables via flip-up mechanisms that open like a book to reveal the display.

In areas adjacent to the pool, automated systems manage the sliding of bar counter tops, uncovering the cocktail preparation area and extending the surface to accommodate more guests.

Technology that appears only when it is needed.

Our Outdoor Solutions

Outdoor common areas are increasingly becoming multifunctional spaces where guests socialise, relax and work.

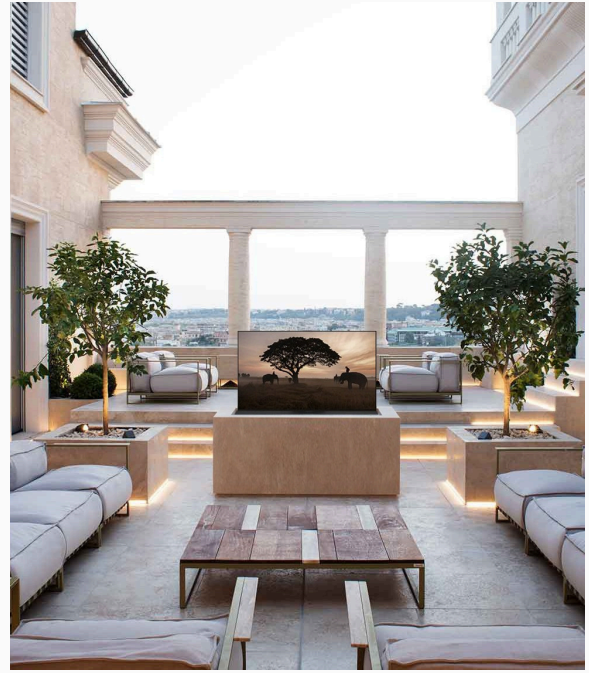

Our movement systems allow these spaces to adapt to different needs while maintaining a clean aesthetic.

Top

Automated sliding bar tops that reveal the cocktail area and extend the counter.

TV Lifts

Screens integrated inside furniture, visible only when activated.

Table Systems

Flip-up TV systems installed in coffee tables in lounge and relaxation areas.

Wall Systems

No boundaries for your TV

Concealed installation opens up the possibility of bringing the large-screen experience to rooms where a hi-tech television would ordinarily seem out of place.

With our movement systems, there are no longer any limits to where a TV can be positioned.

One of the core principles of design is that the form of an object should follow its function.

An intrusive television that clashes with a room's aesthetic should not deprive guests of the pleasure of catching the latest news from bed or enjoying a film from the bath.

By making use of areas that typically go unused, the wall series systems free up sightlines without sacrificing walls to a TV position.

Customisable solutions

The applications of our mechanisms are wide-ranging, and it is also possible to combine multiple systems to create entirely unique solutions.

In the images above, the television is concealed behind a panel that lowers, with a screen rotation system enabling comfortable viewing.

In the images below, a custom mechanism created for a restaurant at a resort in Qatar.

The TV travels vertically along a track and can be manually oriented using rotation pins, ensuring optimal viewing from both the sofas and the dining table.

Others Systems

Mobile Bar, Artwork and Beyond

Within luxury hotel rooms, Sea & Symphony products can set far more than just screens in motion.

We also offer solutions for moving small appliances such as coffee machines, artwork panels concealing safes, and fully bespoke projects capable of moving entire bookcases.

One solution that consistently delivers a wow moment is the motorised minibar unit housing chilled champagne and glasses, designed to offer guests a truly special moment of arrival.

Our range includes a variety of models, each designed to address the specific requirements that may arise when planning any given space.

Custom Made: infinite compositional possibilities

For over twenty years we have brought to our customers a rigorous technical and professional approach, combined with a human, approachable attitude that allows us to interpret and give form to the countless nuances of tailor-made work.

In a refined and demanding market such as luxury furnishing, which calls for bespoke and highly specific solutions, the craftsmanship that defines us makes our products the optimal choice for meeting the expectations of every client.
