

TRANSPORT SOLUTIONS GUIDE

WyreStorm

TRANSPORT ENVIRONMENTS

WyreStorm understands that integrating technology in transport environments can be a daunting task, but we're here to help. A venue-focused AV system must be reliable, easy to install and most importantly – easy to use. With our hybrid technology solutions, WyreStorm can help you minimize complexity and maximize functionality to stay within your budget. WyreStorm solutions are perfectly suited for public spaces, congregation areas, as well as large-scale exhibitions and sporting events.

Whether you want to upgrade an existing system or install a new system altogether, WyreStorm has you covered.

FLY ABOVE THE REST WITH AIRPORT AV SOLUTIONS

Since 1909, airports have opened up the world and have become the heart of public transport. With an average of 22.2 billion passengers a year all over the world traveling via an airport, these passengers need to know exactly where to go easily and at any given moment. So having digital signage all over the airport is an absolute must.

To accommodate the huge amount of passengers at modern day airports, developers are having to keep expanding, which only means more areas for digital signage and even longer transmission runs. So an AV solution needs to be completely scalable and flexible to accommodate this.

HYBRID AV OVER IP SOLUTIONS

NETWORKHD

Send your content to digital signage screens in restaurants waiting areas to create information boards for visitors.

Send your digital directory content over great distances so your visitors know exactly where they need to go.

Distribute your digital signage around the whole terminal simply and easily.

Create mind blowing standard or mosaic video walls to really grab people's attention.

Keep all of your source devices in a remote location to keep your installations tidy and accessible.

Use the WyreStorm NHD-110-RX-S Sealoc® treated weatherproof receiver for outdoor common areas.

The NetworkHD 100 series supports 1080p content distribution and video walls, making it ideal for showing sports content on small-to-medium size deployments. With the Sealoc® treated weatherproof receiver, outdoor environments can now get the same love as inside, meaning you can take your AV signals anywhere.

WyreStorm's NetworkHD 500 Series is perfect for areas that need a little more of the "WOW" factor. With support of 4K HDR 4:4:4 video content and the ability to create standard or Mosaic video walls, the visitors to the convention center will be in a pixel-perfect paradise. Signals can even be transported over fiber, allowing for 300m of signal transmission distance.

ALL ABOARD THE AV TRAIN WITH HYBRID SOLUTIONS

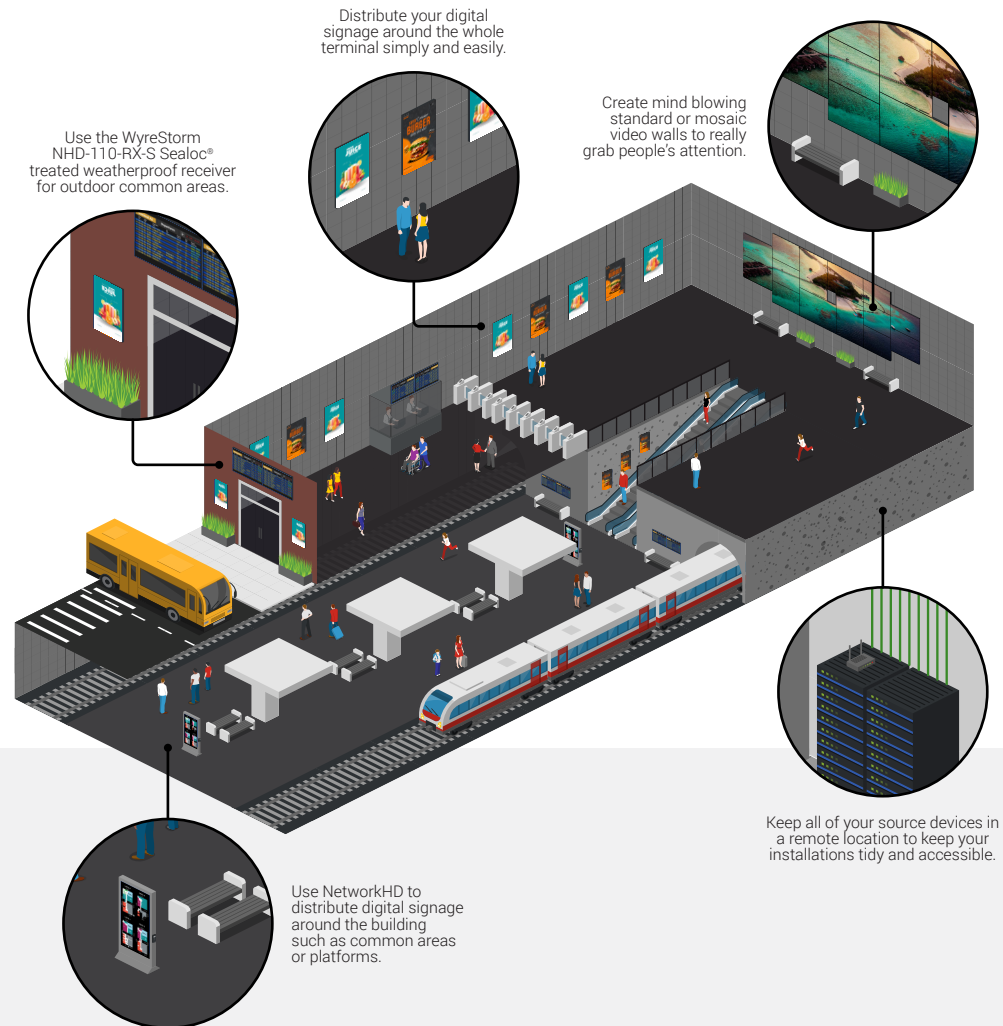

Railways are the veins and arteries of the world, and with an estimated seven million train stations in the world, getting to the one you need to get to can be daunting. Using digital signage solutions can be a quick and easy way of getting the most updated information to passengers when they need it.

To accommodate the huge amount of information at modern train stations and the huge amount of passengers travelling through them, developers are having to keep expanding, which only means more areas for digital signage and even longer transmission runs. So an AV solution needs to be completely scalable and flexible to accommodate this.

SET SAIL WITH HYBRID AV OVER IP SOLUTIONS

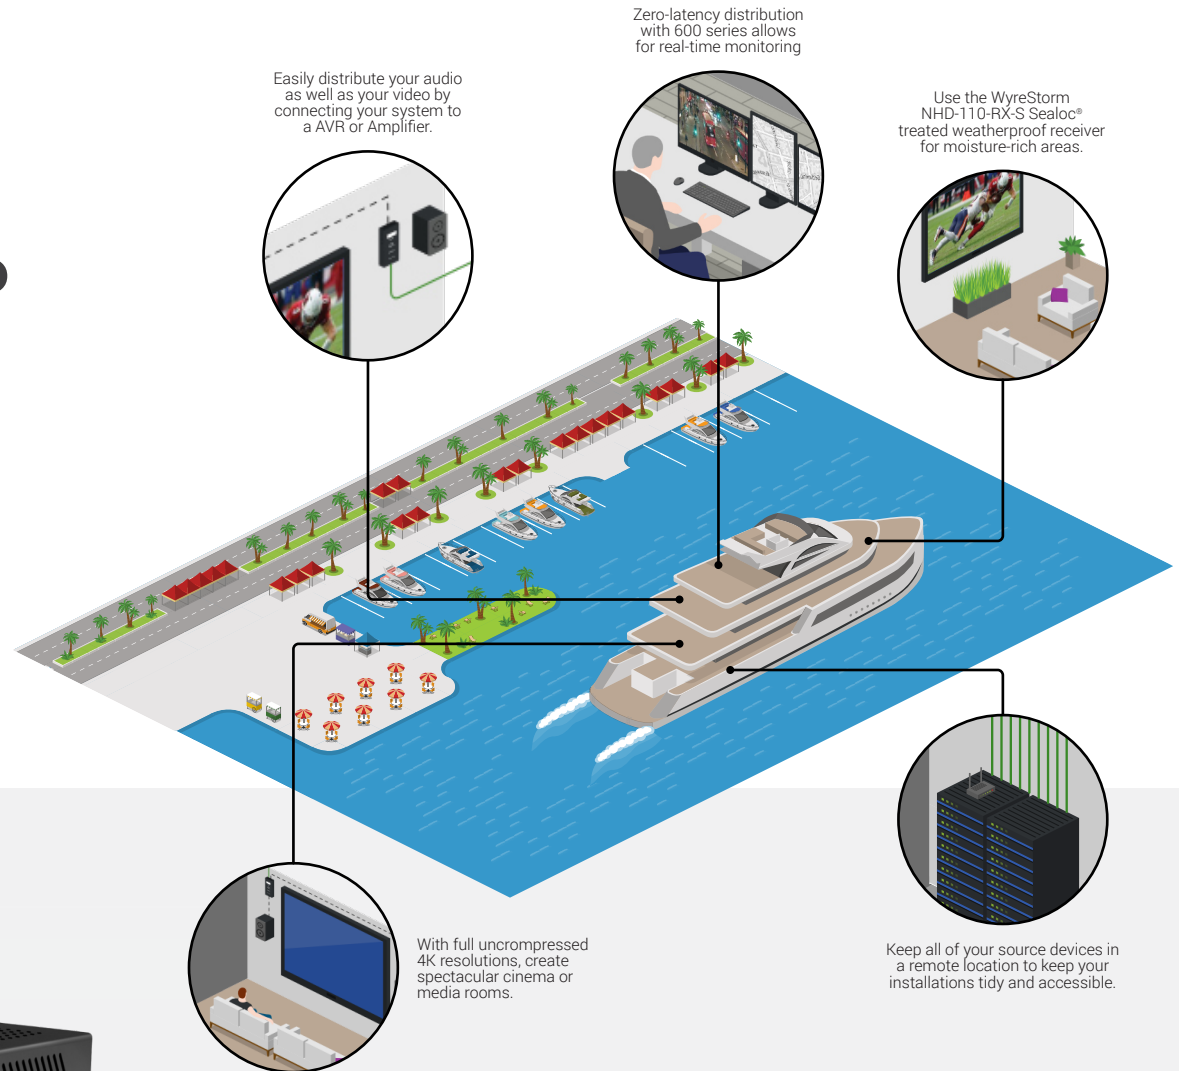

As the world becomes more accustomed to luxury, the superyacht industry has been surging ahead with a wave of bigger, bolder and more beautiful superyachts. The trend towards larger yachts is coupled with a desire for eco-friendliness, as discerning travellers look to minimise their impacts on the ocean's ecosystems.

Simultaneously, technological advancements have made waves in the superyacht world—automation and smart systems are becoming more prevalent, offering a level of convenience and luxury once thought unimaginable.

With the Sealoc® treated weatherproof receiver, outdoor environments can now get the same love as inside, meaning you can take your AV signals anywhere.

WyreStorm's NetworkHD 600 Series is perfectly suited for transport installations, due to its ability to deliver the most demanding content and work within an IT architecture, ensuring pixel-for-pixel clarity. Frame buffer technology ensures switch command speeds of <100ms, which means it can match the demanding nature of the technology in the yacht and the needs of the owners.

Powerful. Reliable. Simple.
