INVISIBLE SERIES SOUND ISOLATING ENCLOSURE INSTALLATION INSTRUCTIONS

INTRODUCTION

Sonance Invisible Series Sound Isolating Enclosures reduce sound transmission into rooms that are adjacent to speakers mounted in walls or in ceilings. For the enclosures to be effective, it is important that they are installed according to the following directions to ensure a tight seal with the speaker.

INSTALLATION

Step 1

Route the wire from the IS speaker through the air tight connector on the enclosure. You might need to loosen the nut on the air tight connector to allow the wire to pass through easily.

Step 2

Place the speaker on a flat surface. Place the enclosure in the groove on the back of the IS speaker baffle. Use the provided screws to attach the enclosure to the speaker.

NOTE: Make sure that the rubber gasket remains under the edge of the enclosure.

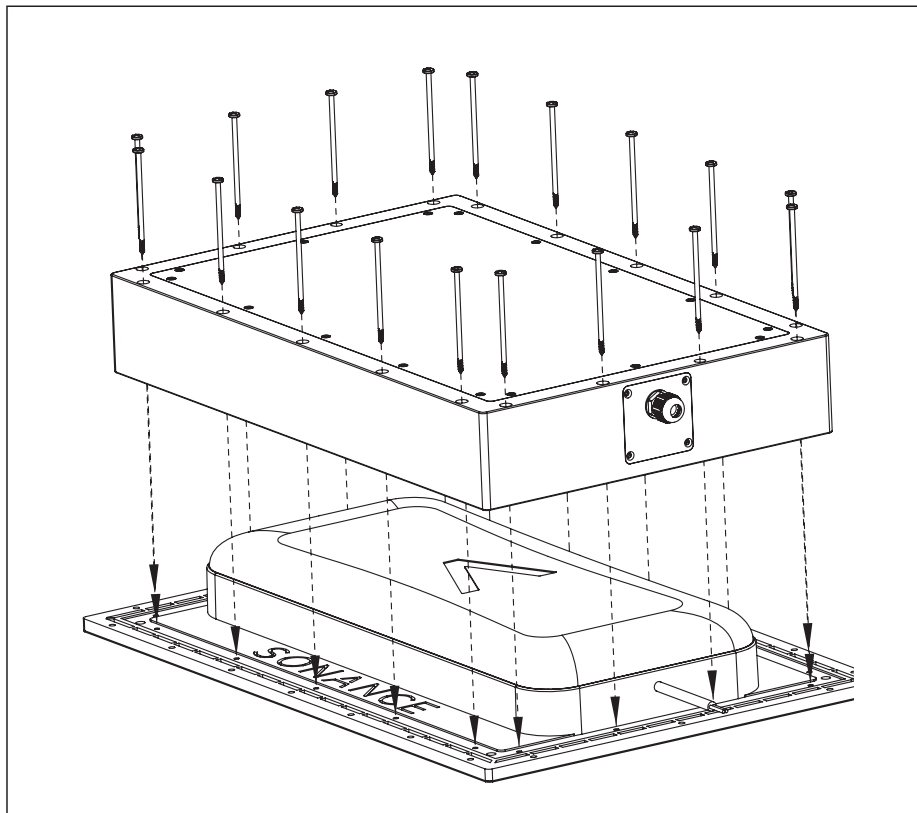

To ensure that the gasket sits properly, tighten the screws in a crisscross and diagonal pattern. Apply an equal amount of torque to each screw.

IMPORTANT: Always use low-torque settings. Never over tighten.

Step 3

Tighten the nut on the air tight connector to seal up the enclosure and capture the speaker wire. Connect the wires from your amplifier to the speaker wires normally.

NOTE: All Sonance Invisible Series speaker and subwoofer models have a 3.39" (86mm) mounting depth when installed with the Sound Isolating Enclosure. (Models IS8T and IS15W include the enclosure built in and do not require this accessory).

Note: Contact Sonance Technical Support for replacement screws.
