SOLD AS EACH

Visual Experience with Quadrtech is the line of premium Visual Experience models engineered for superior fidelity and durability with seamless alignment with other Visual Experience models in the Series. Visual Experience with Quadrtech features a uniquely engineered James Quadrtech Tweeter and Cymatic Diffuser to create crisp details and exceptional dispersion. Each VXQ Quadrtech Tweeter was designed using iterative machine learning to create the ideal experience for each speaker size, a customized feature unique to each.

## QUADRATECH TWEETER AND CYMATIC DIFFUSER

Using advanced simulation and iterative machine learning design, we took James Quad tweeter to the next level of performance. Each VXQ model has a uniquely designed James Quadratech tweeter and surrounding Cymatic Diffuser, the first design of its kind which creates an astonishingly clear and balanced dispersion.

## KEY FEATURES

## FEATURES AND BENEFITS

**ROTO-LOCK® Superspeed Clamp System:** Next generation aluminum/stainless steel clamp and screw system drastically improves installation time and ease.

**Brilliant White Micro Trim XPC Grille:** Brighter, more consistent white shade. RAL standardized to better match ceilings and walls. Bezel size 50% smaller with knife-edge to minimize shadow lines. Extreme Post-Capture system creates a robust magnetic lock between speaker and grille that resists intense shear force from wind and power washers.

**Optional Trimless XPC Grille:** Same brilliant white color but in a modern, monolithic aesthetic with no bezel and built-in XPC retention.

**Quadratech Tweeters with Cymatic Diffusers:** Our next generation quad tweeter with state-of-the-art cymatic diffusers that correct high frequency polar patterns. Achieve even, balanced tonality to better fill spaces with smooth, extended treble that is remarkably consistent at any angle.

**CDX Crossovers:** Adapted from Sonance Invisible Series, our Constant Directivity Crossovers align tweeters and woofers to provide consistent dispersion at all frequencies.

**Advanced Driver Motor Topology:** Engineered via sophisticated magnetic and physical simulations to reduce distortion to nearly inaudible levels, resulting in the highest fidelity drivers we have ever made.

**Multitude of Optional Accessories:** With 127 new speakers and accessories, 1,800 total unique combinations of speaker configurations are possible from grilles to enclosures to other installation accessories. This gives the flexibility to tailor Visual Experience to blend into the design of any space.
