CABLE ROUTING

Screen cables are routed behind the Base Panel and out the right side of the Beam into the Cable Track. Cables must be routed carefully to prevent any interference with the LSL beam as it operates.

Screen and Mechanism cables should be routed to a control box in the bottom of the cabinet.

BASE PANEL AND FLAP PANEL DETAILS

A Base Panel of less than 1050mm [41 5/16"] wide will cause the EFA to interfere with the LSL beam.

This can be avoided by orientating the EFA away from the LSL. It will however require more space for the EFA to be positioned to the side of the cabinet.
