SPECIFICATION	MEASUREMENTS
Minimum Screen Height	700 [27 9/16"]
Maximum Screen Height	800 [31 1/2"]
Minimum Screen Width	1100 [43 5/16"]
Maximum Screen Width	1600 [63"]
Maximum Moving Panel Weight	30Kg (88lbs) per panel
Maximum Screen Weight	45Kg (99lbs)
Total Mechanism Weight	TBC
Packaging Dimensions (LxWxH)	TBC
Shipping Weight	TBC
Movement Type	Motorised
Power Supply Required	110V - 240V AC
Power Consumption Max.	120W
Power Consumption Standby	3W
Mounting Patterns Supported	VESA 400, 300, 200 W x 400, 300, 200 H
Control Options	IR Remote, Contact Closure
Product Options / Features	AB pairing option
Package Contents	Mechanism, IR remote control, Bolt Pack
Marine Suitable	Yes (Indoor)

1. Panel Closed

2. Panel Retracts

3. Panel Lifts

### CABINET DIMENSIONS - DEPTH

The minimum depth of 235mm [9 1/4"] allows for a maximum screen depth of 30mm [1 3/16"].

Screens with a greater thickness will need the cabinet depth to increase i.e. a 100mm [3 15/16"] thick screen will require a cabinet of 305mm [12"].

Screens thinner than 30mm [1 3/16"] must still use the minimum 235mm [9 1/4"] cabinet depth.

Recommended batten to support front panel above opening

Minimum Internal Cabinet Depth

The moving panel retracts back by 65mm [2 9/16"] before splitting. For this reason it is advised the front panel work and support batten is no more than 50mm [1 15/16"] thick to give 15mm [9/16"] clearance.

Thicker panels are possible, but will add to the cabinet depth and require customisation to the mechanism design.

### QA2 - QUAD ARM

The Quad Arm has a service mode that can be used during installation and servicing of the mechanism and the screen.

This allows the screen to be advanced out from the wall to provide access to rear of the screen and inside the mechanism during fitting.

QA2 - OUT

QA2 - SERVICE

QA2 - SWIVEL

Maximum QA2 swivel is 75°. However depending on the screen and cabinet depth this will need to be reduced to prevent the screen being obscured by the cabinet.

### CABINET DETAILING & ACCESS

The SPS mechanism requires certain access for installation and to be serviced.

For installation the top panel must be removable to provide access to all the fixing points of the SPS mechanism.

For servicing the best option is to have the areas to the left and right of the opening on hinges. This will provide enough access to everything that will be needed to service and maintain the mechanism. Alternatively the side panels could be made to be easily removable on suitable catches / fixings.

The Moving Panel Mechanism mounts to the side walls of the cabinet, and the Advance Bracket mounts to the back of the cabinet. It is essential that these surfaces can take the weight of the mechanism, moving panel and screen.

The SPS and QA2 are each supplied with a control box on a 3m [10'] flying lead linked together via contact closure. These must be fitted in an easily accessible location. These will be the first item to be checked if there is an issue with the mechanism. Mains power and control connections (IR sensor / receiver, contact closure) are all made at the control box.

- RS232 Link
- Mechanism Cables
- Power Cables

Control box wiring loom must be routed to the bottom left corner of the cabinet.

### CONTROL BOX

**NOTE:** RS232 CONTROL METHOD UNAVAILABLE.

### NOTES

- POWER SUPPLY UNIT (PSU) WILL ALLOW 110V OR 240V AC INPUT. THE SAME PSU IS USED FOR EU OR US MAINS SUPPLIES.
- OTHER THAN CONTROL CABLES, ALL CABLES TERMINATE AT CONTROL BOARD VIA STANDARD PHOENIX CONNECTORS.
- CABLE LOOM LENGTH SUPPLIED AT APPROX. 3m [118"]. LOOM CAN BE EXTENDED UP TO MAXIMUM OF APPROX. 10m [400"].
- MINIMUM CABLE BEND RADIUS 25mm [1"].

### INSTALLATION OVERVIEW

1. Mount the mechanism side channels to the side walls of the cabinet. Ensure the mechanism mount brackets are positioned 10mm back from the edge of the front panels.

3. Run the mechanism, adjust the up switch so that the carriages moves the height of the moving panel + 25mm [1"].

#### Rear View

**Up Switch Adjustment**  
Loosen the bolt and slide the switch striker to the desired position. Ensure the bolt is tightened after adjustment.

Switch Striker

2. Install the telescopic drive shaft between both sides of the mechanism. Ensure that the moving panel brackets are at the same height.

### INSTALLATION OVERVIEW

4. Mount the moving panel to the moving panel brackets 15mm from the base of the moving panel and 94mm in from the edge.
5. Mount the moving panel back onto the mechanism, use the slots in the mount brackets to align the panel and get it into the desired position.

Recommended to use 5mm shims to align the top moving panel with the lower moving panel.
