

ELEMENT SPEAKERS

The Phantom Series, LF Series, and speaker grills are now equipped with advanced Nano coating technology—an ultra-thin, invisible layer that chemically bonds to the surface, creating a durable barrier against the harshest environmental conditions. This innovative coating offers superior protection from humidity, salt air, and moisture, making these speakers ideal for coastal areas, bathrooms, outdoor zones, and high-humidity environments. The Nano coating not only prevents corrosion and rust but also extends the life of the speaker components without compromising sound quality or aesthetics. Say goodbye to weather-related wear and tear—these speakers are built to withstand the elements and keep the music going strong in any setting.
